EHV+ Series
IEC61131-3 Compliant Programming Software
EHV-CoDeSys 3.4 SP1

Dear Ladies and Gentlemen,

Dear Business Friends,

Please find below news about our EHV+ CPU series and the EHV-CoDeSys programming environment.

EHV-CoDeSys

As announced in the last PCS NEWS we have now released EHV-CoDeSys based on CoDeSys version 3.4 Service Pack 1. The product is ready for sale and available from stock for a very reasonable price.

Note, that only EHV+ CPUs of firmware version 3.4.1.0 are supported. Promotion units can be upgraded to the latest firmware. If required please send them to my attention.

Promotion material/Microsite

Beside the standard promotion material we have set up a special microsite for the new EHV+ CPU series. Below you can find the dedicated link.

www.hitachi-ds.com/EHV-CoDeSys-en

If you are interested, it is possible to allocate the microsite in your local language. In this case you have to translate the content while we arrange the administration.
